Biochemistry

THE MOLECULAR BASIS OF LIFE

FIFTH EDITION

Trudy McKee

James R. McKee

New York Oxford
OXFORD UNIVERSITY PRESS

Contents

Preface xxi

1 Biochemistry: An Introduction 1

Life: It Is a Mystery! 2

1.1 What is Life? 5

1.2 Biomolecules 7
- Functional Groups of Organic Biomolecules 7
- Major Classes of Small Biomolecules 8

1.3 Is the Living Cell a Chemical Factory? 15
- Biochemical Reactions 16
- Energy 19
- Overview of Metabolism 20
- Biological Order 21

1.4 Systems Biology 22
- Emergence 23
- Robustness 23
- Modularity 24

Biochemistry IN THE LAB
An Introduction 25

Chapter Summary 25
Suggested Readings 26
Key Words 26
Review Questions 27
Thought Questions 29

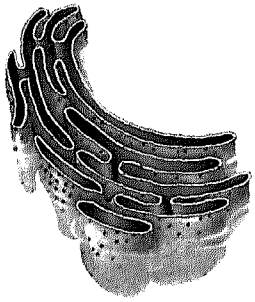
2 Living Cells 31

Our Bodies, Our Selves 32

2.1 Basic Themes 34
- Water 34
- Biological Membranes 35
- Self-Assembly 35
- Molecular Machines 36
- Macromolecular Crowding 37
- Signal Transduction 37

2.2 Structure of Prokaryotic Cells 38
- Cell Wall 38
- Plasma Membrane 40
- Cytoplasm 41
- Pili and Flagella 41

2.3 Structure of Eukaryotic Cells 42
- Plasma Membrane 42
- Endoplasmic Reticulum 45
- Golgi Apparatus 46
- Nucleus 47
- Vesicular Organelles 50
- Mitochondria 53
- Peroxisomes 55
- Plastids 56
- Cytoskeleton 57
- Ribosomes 61



Biochemistry IN PERSPECTIVE
Primary Cilia and Human Disease 62

Biochemistry IN THE LAB
Cell Technology 63

Available Online:
Biochemistry IN PERSPECTIVE
Organelles and Human Disease
Chapter Summary 65
Suggested Readings 66
Key Words 66
Review Questions 66
Thought Questions 68

3 Water: The Matrix of Life 69

Water, Water, Everywhere 70

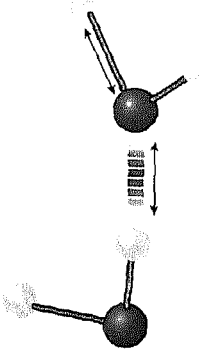
3.1 Molecular Structure of Water 72

3.2 Noncovalent Bonding 73
- Ionic Interactions 74
- Hydrogen Bonds 74
- Van der Waals Forces 75

3.3 Thermal Properties of Water 76

3.4 Solvent Properties of Water 78
- Hydrophilic Molecules, Cell Water Structuring, and Sol-Gel Transitions 78
- Hydrophobic Molecules and the Hydrophobic Effect 80
- Amphipathic Molecules 81
- Osmotic Pressure 82

3.5 Ionization of Water 86
- Acids, Bases, and pH 86
- Buffers 88
- Physiological Buffers 94



Biochemistry IN PERSPECTIVE
Cell Volume Regulation and Metabolism 96

Available Online:
Biochemistry IN PERSPECTIVE
Water, Abiotic Stress, and Compatible Solutes

Biochemistry IN THE LAB
Dialysis

Chapter Summary 97
Suggested Readings 98
Key Words 98
Review Questions 98
Thought Questions 100

4 Energy 101

Energy and Life's Deep, Dark Secrets 102

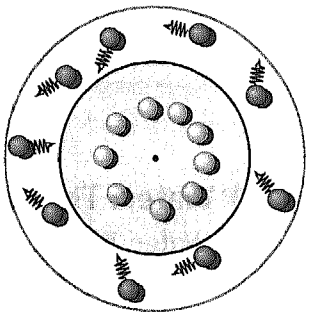
4.1 Thermodynamics 104
First Law of Thermodynamics 105
Second Law of Thermodynamics 107

4.2 Free Energy 109
Standard Free Energy Changes 110
Coupled Reactions 111
The Hydrophobic Effect Revisited 113

4.3 The Role of ATP 115

Biochemistry IN PERSPECTIVE
Nonequilibrium Thermodynamics and the Evolution of Life 114

Available Online:
Biochemistry IN PERSPECTIVE
The Extremophiles: Organisms That Make a Living in Hostile Environments
Chapter Summary 119
Suggested Readings 119
Key Words 119
Review Questions 120
Thought Questions 121



5 Amino Acids, Peptides, and Proteins 123

Spider Silk: A Biosteel Protein 124

5.1 Amino Acids 125
Amino Acid Classes 127
Biologically Active Amino Acids 129
Modified Amino Acids in Proteins 130
Amino Acid Stereoisomers 130
Titration of Amino Acids 131
Amino Acid Reactions 135

5.2 Peptides 139

5.3 Proteins 141
Protein Structure 142
The Folding Problem 157
Fibrous Proteins 160
Globular Proteins 163

5.4 Molecular Machines 168
Motor Proteins 169

Biochemistry IN PERSPECTIVE
Spider Silk and Biomimetics 170

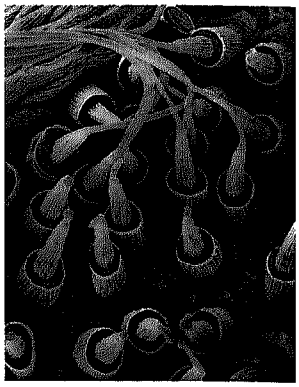
Biochemistry IN THE LAB
Protein Technology 173

Available Online:
Biochemistry IN PERSPECTIVE
Protein Poisons

Biochemistry IN PERSPECTIVE
Protein Folding and Human Disease

Biochemistry IN PERSPECTIVE
Myosin: A Molecular Machine

Biochemistry IN THE LAB
Protein Sequence Analysis: The Edman Degradation
Chapter Summary 178
Suggested Readings 178
Key Words 179
Review Questions 179
Thought Questions 180



6 Enzymes 182

Humans and Enzymes: A Brief History 183

6.1 Properties of Enzymes 184

6.2 Classification of Enzymes 187

6.3 Enzyme Kinetics 190
Michaelis-Menten Kinetics 192
Lineweaver-Burk Plots 194
Multisubstrate Reactions 195
Enzyme Inhibition 196
Enzyme Kinetics, Metabolism, and Macromolecular Crowding 202

6.4 Catalysis 203
Organic Reactions and the Transition State 203
Catalytic Mechanisms 204
The Roles of Amino Acids in Enzyme Catalysis 207
The Role of Cofactors in Enzyme Catalysis 208
Effects of Temperature and pH on Enzyme-Catalyzed Reactions 210
Detailed Mechanisms of Enzyme Catalysis 212

6.5 Enzyme Regulation 213
Genetic Control 215
Covalent Modification 215
Allosteric Regulation 216
Compartmentation 218

Biochemistry IN PERSPECTIVE
Alcohol Dehydrogenase: A Tale of Two Species 220

Available Online:
Biochemistry IN PERSPECTIVE
Enzymes and Clinical Medicine

Biochemistry IN PERSPECTIVE
Quantum Tunneling and Catalysis

Chapter Summary 221
Suggested Readings 222
Key Words 222
Review Questions 222
Thought Questions 224

7 Carbohydrates 226

Sweet and Bitter Taste: The Roles of Sugar Molecules 227

7.1 Monosaccharides 228
- Monosaccharide Stereoisomers 229
- Cyclic Structure of Monosaccharides 229
- Reactions of Monosaccharides 232
- Important Monosaccharides 238
- Monosaccharide Derivatives 240

7.2 Disaccharides 241

7.3 Polysaccharides 242
- Homoglycans 242
- Heteroglycans 246

7.4 Glycoconjugates 248
- Proteoglycans 248
- Glycoproteins 249

7.5 The Sugar Code 250
- Lectins: Translators of the Sugar Code 252
- The Glycome 253

Biochemistry IN THE LAB
Glycomics 254

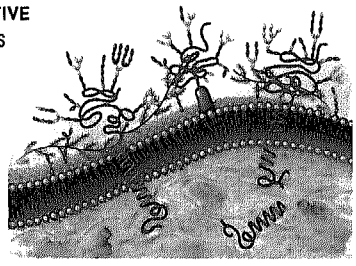
Available Online:

Biochemistry IN PERSPECTIVE
Scurvy and Ascorbic Acid

Biochemistry IN PERSPECTIVE
Sweet Medicine

Biochemistry IN PERSPECTIVE
Conversion of Fischer Structures into Haworth Structures

Chapter Summary 255
Suggested Readings 255
Key Words 256
Review Questions 256
Thought Questions 257



8 Carbohydrate Metabolism 259

Metabolism and Jet Engines 260

8.1 Glycolysis 261
- The Reactions of the Glycolytic Pathway 264
- The Fates of Pyruvate 270
- The Energetics of Glycolysis 272
- Regulation of Glycolysis 274

8.2 Gluconeogenesis 277
- Gluconeogenesis Reactions 277
- Gluconeogenesis Substrates 282
- Gluconeogenesis Regulation 283

8.3 The Pentose Phosphate Pathway 285

8.4 Metabolism of Other Important Sugars 289
- Fructose Metabolism 289

8.5 Glycogen Metabolism 291
- Glycogenesis 291
- Glycogenolysis 294
- Regulation of Glycogen Metabolism 295

Biochemistry IN PERSPECTIVE
Saccharomyces cerevisiae and the Crabtree Effect 273

Biochemistry IN PERSPECTIVE
Turbo Design Can Be Dangerous 279

Available Online:

Biochemistry IN PERSPECTIVE
Fermentation: An Ancient Heritage

Chapter Summary 299
Suggested Readings 299
Key Words 299
Review Questions 300
Thought Questions 301

9 Aerobic Metabolism I: The Citric Acid Cycle 302

Oxygen and Evolution: Chance and Necessity 303

9.1 Oxidation-Reduction Reactions 305
- Redox Coenzymes 308
- Aerobic Metabolism 312

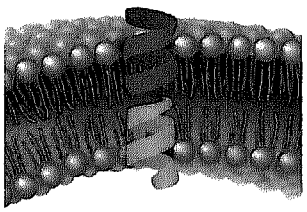
9.2 Citric Acid Cycle 312
- Conversion of Pyruvate to Acetyl-CoA 314
- Reactions of the Citric Acid Cycle 317
- Fate of Carbon Atoms in the Citric Acid Cycle 321
- The Amphibolic Citric Acid Cycle 321
- Citric Acid Cycle Regulation 323
- The Citric Acid Cycle and Human Disease 326
- The Glyoxylate Cycle 327

Biochemistry IN PERSPECTIVE
The Evolutionary History of the Citric Acid Cycle 329

Available Online:

Biochemistry IN PERSPECTIVE
Hans Krebs and the Citric Acid Cycle

Chapter Summary 330
Suggested Readings 331
Key Words 331
Review Questions 331
Thought Questions 332



10 Aerobic Metabolism II: Electron Transport and Oxidative Phosphorylation 334

Oxygen: A Molecular Paradox 335

10.1 Electron Transport 336
- Electron Transport and Its Components 336
- Electron Transport: The Fluid-State and Solid-State Models 343
- Electron Transport Inhibitors 343

10.2 Oxidative Phosphorylation 344
- The Chemiosmotic Theory 344
- ATP Synthesis 347
- Control of Oxidative Phosphorylation 348
- The Complete Oxidation of Glucose 349
- Uncoupled Electron Transport 353

10.3 Oxygen, Cell Function, and Oxidative Stress 353
- Reactive Oxygen Species 354
- Antioxidant Enzyme Systems 359
- Antioxidant Molecules 361

Biochemistry IN PERSPECTIVE
Myocardial Infarct: Ischemia and Reperfusion 364

Available Online:
Biochemistry IN PERSPECTIVE
Glucose-6-Phosphate Dehydrogenase Deficiency
Chapter Summary 365
Suggested Readings 365
Key Words 365
Review Questions 366
Thought Questions 367

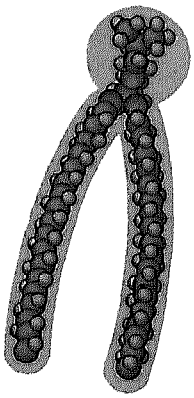
11 Lipids and Membranes 369

The Low-Fat Diet 370

11.1 Lipid Classes 371
- Fatty Acids 371
- The Eicosanoids 374
- Triacylglycerols 377
- Wax Esters 378
- Phospholipids 378
- Phospholipases 382
- Sphingolipids 382
- Sphingolipid Storage Diseases 384
- Isoprenoids 385
- Lipoproteins 389

11.2 Membranes 391
- Membrane Structure 392
- Membrane Function 398

Biochemistry IN PERSPECTIVE
Botulism and Membrane Fusion 405
Chapter Summary 406
Suggested Readings 407
Key Words 407
Review Questions 407
Thought Questions 409



12 Lipid Metabolism 410

Abetalipoproteinemia 411

12.1 Fatty Acids, Triacylglycerols, and the Lipoprotein Pathways 412

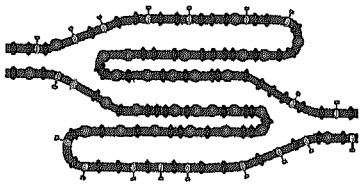
12.2 Glyceroneogenesis and the TG Cycle 414
- Fatty Acid Degradation 418
- The Complete Oxidation of a Fatty Acid 422
- Fatty Acid Oxidation: Double Bonds and Odd Chains 424
- Fatty Acid Biosynthesis 427
- Regulation of Fatty Acid Metabolism in Mammals 435
- Lipoprotein Metabolism: The Endogenous Pathway 439

12.3 Membrane Lipid Metabolism 439
- Phospholipid Metabolism 439
- Sphingolipid Metabolism 442

12.4 Isoprenoid Metabolism 442
- Cholesterol Metabolism 442
- The Cholesterol Biosynthetic Pathway and Drug Therapy 453

Biochemistry IN PERSPECTIVE
Atherosclerosis 440

Biochemistry IN PERSPECTIVE
Biotransformation 454
Chapter Summary 456
Suggested Readings 456
Key Words 457
Review Questions 457
Thought Questions 459



13 Photosynthesis 460

Climate Change, Renewable Energy, and Photosynthesis 461

13.1 Chlorophyll and Chloroplasts 463

13.2 Light 469

13.3 Light Reactions 472
- Photosystem II and Water Oxidation 474
- Photosystem I and NADPH Synthesis 476
- Photophosphorylation 478

13.4 The Light-Independent Reactions 479
- The Calvin Cycle 479
- Photorespiration 483
- Alternatives to C3 Metabolism 484

13.5 Regulation of Photosynthesis 486
- Light Control of Photosynthesis 487
- Control of Ribulose-1,5-Bisphosphate Carboxylase 488

Biochemistry IN PERSPECTIVE
Photosynthesis in the Deep 490

Available Online:
Biochemistry IN PERSPECTIVE
Starch and Sucrose Metabolism

Biochemistry IN THE LAB
Photosynthetic Studies

Chapter Summary 490
Suggested Readings 491
Key Words 491
Review Questions 491
Thought Questions 493

14 Nitrogen Metabolism I: Synthesis 494

Nitrogen and the Gulf of Mexico Dead Zone 495

14.1 Nitrogen Fixation 497
The Nitrogen Fixation Reaction 497
Nitrogen Assimilation 499

14.2 Amino Acid Biosynthesis 500
Amino Acid Metabolism Overview 500
Reactions of Amino Groups 502
Synthesis of the Amino Acids 505

14.3 Biosynthetic Reactions Involving Amino Acids 512
One-Carbon Metabolism 513
Glutathione 518
Neurotransmitters 519
Nucleotides 524
Heme 533

Biochemistry IN PERSPECTIVE
Gasotransmitters 522

Available Online:
Biochemistry IN PERSPECTIVE
The Amine Neurotransmitters

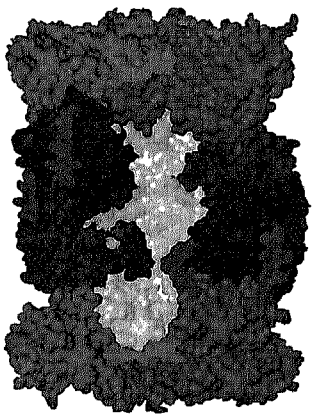
Biochemistry IN PERSPECTIVE
Parkinson's Disease and Dopamine

Biochemistry IN PERSPECTIVE
Heme and Chlorophyll Biosynthesis

Biochemistry IN PERSPECTIVE
The Essential Amino Acids

Biochemistry IN PERSPECTIVE
The Nucleotides: IMP Biosynthesis

Biochemistry IN PERSPECTIVE
Lead Poisoning
Chapter Summary 534
Suggested Readings 534
Key Words 534
Review Questions 535
Thought Questions 536



15 Nitrogen Metabolism II: Degradation 538

Degradative Pathways and Human Disorders 539

15.1 Protein Turnover 540
Ubiquitin Proteasomal System 541
Autophagy-Lysosomal System 543

15.2 Amino Acid Catabolism 544
Deamination 544
Urea Synthesis 545
Control of the Urea Cycle 548
Catabolism of Amino Acid Carbon Skeletons 549

15.3 Neurotransmitter Degradation 559

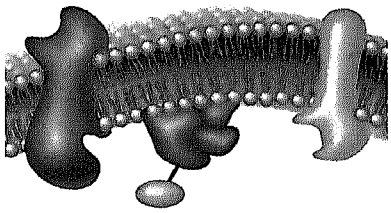
15.4 Nucleotide Degradation 559
Purine Catabolism 560
Pyrimidine Catabolism 562

Biochemistry IN PERSPECTIVE
Disorders of Amino Acid Catabolism 558

Available Online:
Biochemistry IN PERSPECTIVE
Hyperammonemia

Biochemistry IN PERSPECTIVE
Gout

Biochemistry IN PERSPECTIVE
Heme Biotransformation
Chapter Summary 564
Suggested Readings 564
Key Words 564
Review Questions 565
Thought Questions 566



16 Integration of Metabolism 568

Hypertension and Uric Acid: A Diet Connection? 569

16.1 Overview of Metabolism 570

16.2 Hormones and Intercellular Communication 572
Peptide Hormones 572
Growth Factors 580
Steroid and Thyroid Hormone Mechanisms 583

16.3 Metabolism in the Mammalian Body: Division of Labor 584
Gastrointestinal Tract 585
Liver 585
Muscle 586
Adipose Tissue 586
Brain 586
Kidney 587

16.4 The Feeding-Fasting Cycle 587
The Feeding Phase 587
The Fasting Phase 590
Feeding Behavior 591

Biochemistry IN PERSPECTIVE
Diabetes Mellitus 581

Biochemistry IN PERSPECTIVE
Obesity and the Metabolic Syndrome 594

Available Online:
Biochemistry IN PERSPECTIVE
Mammalian Hormones and the Hormone Cascade System
Chapter Summary 595
Suggested Readings 596

Key Words 596
Review Questions 596
Thought Questions 598

17 Nucleic Acids 599

What Makes Us Human? 600

17.1 DNA 604
- DNA Structure: The Nature of Mutation 607
- DNA Structure: The Genetic Material 611
- DNA Structure: Variations on a Theme 613
- DNA Supercoiling 616
- Chromosomes and Chromatin 617
- Genome Structure 622

17.2 RNA 626
- Transfer RNA 629
- Ribosomal RNA 636
- Messenger RNA 637
- Noncoding RNA 638

17.3 Viruses 639
- Bacteriophage T4: A Viral Lifestyle 640

Biochemistry IN PERSPECTIVE
Epigenetics and the Epigenome: Genetic Inheritance beyond DNA Base Sequences 627

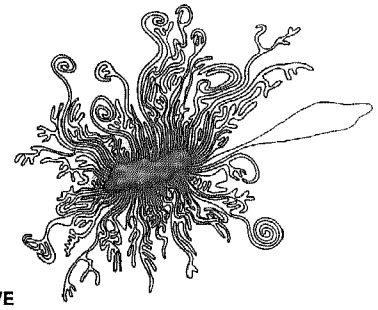
Biochemistry IN THE LAB
Nucleic Acid Methods 630

Biochemistry IN PERSPECTIVE
Forensic Investigations 635

Biochemistry IN PERSPECTIVE
HIV Infection 642

Available Online:
Biochemistry IN PERSPECTIVE
A Short History of DNA Research: The Early Years

Chapter Summary 645
Suggested Readings 646
Key Words 646
Review Questions 646
Thought Questions 648



18 Genetic Information 649

DNA and Chimeras: A Biological and Legal Mystery 650

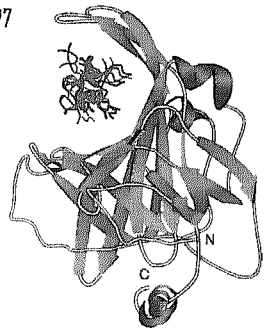
18.1 Genetic Information: Replication, Repair, and Recombination 652
- DNA Replication 653
- DNA Repair 662
- Direct Repairs 664
- DNA Recombination 667

18.2 Transcription 683
- Transcription in Prokaryotes 683
- RNAP and the Prokaryotic Transcription Process 684
- Transcription in Eukaryotes 687

18.3 Gene Expression 693
- Gene Expression in Prokaryotes 695
- Gene Expression in Eukaryotes 697

Biochemistry IN THE LAB
Genomics 676

Biochemistry IN PERSPECTIVE
Carcinogenesis 705
Chapter Summary 707
Suggested Readings 708
Key Words 708
Review Questions 709
Thought Questions 710



19 Protein Synthesis 712

MRSA: The Superbug 713

19.1 The Genetic Code 715
- Codon Usage Bias 716
- Codon-Anticodon Interactions 717
- The Aminoacyl-tRNA Synthetase Reaction 718

19.2 Protein Synthesis 720
- Prokaryotic Protein Synthesis 723
- Eukaryotic Protein Synthesis 729

Biochemistry IN PERSPECTIVE
Trapped Ribosomes: RNA to the Rescue! 730

Biochemistry IN PERSPECTIVE
Context-Dependent Coding Reassignment 737

Biochemistry IN THE LAB
Proteomics 748

Available Online:
Biochemistry IN PERSPECTIVE
EF-Tu: A Motor Protein

Chapter Summary 749
Suggested Readings 750
Key Words 750
Review Questions 750
Thought Questions 752

Appendix: Solutions A-1

Glossary G-1
